Setting up email in Outlook 2007

1. Start Outlook.
2. On the Tools menu, click Account Settings.
3. Click New.
4. Click 'Microsoft Exchange, POP3, IMAP, or HTTP', and then click Next.
5. In the Auto Account Setup dialog box, click to select the Manually configure server settings or additional server types check box, and then click Next.
6. Click Internet E-Mail, and then click Next.
7. Fill out the required settings as following:

Your Name: Your name exactly as you want it to appear to recipients when they receive email from you

Email Address: your full email address - eg jsmith@my-domain.com

Account Type: IMAP (recommended)

Incoming mail server: mail.<domain> - replace <domain> with your domain name, so for example mail.my-domain.com

Outgoing mail server (SMTP): mail.<domain> - same as the Incoming mail server

Username: your full email address once again

Password: your mail box password

Ensure that 'Require logon using Secure Password Authentication (SPA) remains unchecked. This is important as you may experience difficulty sending email with this enabled.

8. Click "More Settings..." in the bottom right of the window
9. Click "Outgoing Server" tab at the top.
10. Tick the box labelled "My outgoing server (SMTP) requires authentication"
11. Click "Advanced" tab at the top
12. In the Outgoing mail (SMTP) box, type 25. *Note, if you have trouble sending e-mail, please try changing this to port 587.
13. Ensure that 'This server requires an encrypted connection (SSL) is unchecked
14. The 'Use the following type of encrypted connection:' option should be set to None
15. Click "Ok" to close the window.
16. Click Next after you have completed entering this configuration information, and then click Finish
